

Why are photovoltaic panels easy to break

Overview

Solar panels are incredibly durable and resilient, and they do not break often. We have seen cases of the glass in solar panels (photovoltaic [PV] modules) breaking differently, and more often, than it did 5 years ago. Modern PV modules often use thinner glass to reduce weight and material costs which lead to glass breakage. Glass breakage is a growing concern for the solar power plant operators. With the trend towards double glass sided modules as seen in Bifacials, or TOPCon with double glass sided. Why do solar panels break in the first place and how to prevent it?

Let's cover it in this article.

Why are photovoltaic panels easy to break

Tough Break: Many Factors Make Glass Breakage More Likely

We have seen cases of the glass in solar panels (photovoltaic [PV] modules) breaking differently, and more often, than it did 5 years ago. There have been many changes to PV module design and ...
