

# Zagreb Airport uses a 10kW energy storage container

## Overview

---

Located in Croatia's capital, this facility uses compressed air energy storage (CAES) technology to store renewable energy during off-peak hours and release it when demand spikes. But how does it work, and why should industries care?

Let's break it down. As countries transition toward renewable energy, air energy storage power stations like Zagreb's facility offer a critical solution for balancing grid stability and storing excess energy. Unlike traditional lithium-ion batteries, CAES leverages underground caverns or tanks to store compressed air. From India to Australia, California to Germany, airports are installing vast solar arrays across terminal rooftops, parking structures, and unused land. Are solar. The Zagreb Air Energy Storage Power Station is turning this vision into reality. Battery storage is the fastest responding on, and it is used to stabilise those grids, as battery. North America leads with 40% market share, driven by streamlined permitting processes and tax incentives that reduce total project costs by 15-25%. Europe follows closely with 32% market share, where standardized container designs have cut installation timelines by 60% compared to traditional.
